

SALVAGETRANSPORTBAG 7 - AIR

The **salvage transport bag 7-Terra** has been designed for the transport of fatally injured persons by means of rope or winch in alpine terrain.

It is characterized by high stability and easy handling at the same time. The 10-point suspension guarantees a safe transport. As with all helicopter rescue bags, there is a Fastening Velcro for attaching the RBS to the foot section.

The large zipper on three sides allows easy opening and closing of the transport bag at any time.

On the front side there is an **A5 document pocket** with a large viewing window for storing important information.

The **welded seams** inside the bag prevent water and other liquids from escaping unintentionally.

The use of tarpaulin fabric allows **easy and quick cleaning** with water and a light soap suds without long drying time.

Art. No.	92217	
Dimensions	Length:	2.050 mm
	Width:	500 mm
Weight	Total:	3,9 kg
Comments	Supplied without transport bag.
